ITU-R Recommendation M.2164 on 23cm amateur service and RNSS operations now published in time for WRC-23 discussions

[Nov 23, 2023](#) · [Spectrum](#) · [Barry, G4SJH](#)

23cm Band

As reported on November 20th, the ITU-R Radio Assembly (RA) met during the week before the World Radio Conference in Dubai. The IARU participated in the meeting and contributed to the development of the draft ITU-R Recommendation for 23cm band amateur operations alongside the co-frequency radio navigation satellite service (RNSS). The published ITU-R Recommendation M.2164 is now available and can be found [here](#) along with a summary of the technical conditions [here](#). The recommendation will form a component of the WRC-23 discussions which are ongoing until December 15th relating to WRC-23 agenda item 9.1b. The final recommendation represents the culmination of more than 4 years of work by the IARU team within the ITU-R study groups to ensure the best outcome for amateur radio in the face of intense regulatory, political and commercial pressure.
